

IMPLEMENTING ISO31000 RISK MANAGEMENT ACROSS DIFFERENT MANAGEMENT SYSTEMS (ISO9001, ISO22301, ISO31000 & ISO45001)

COURSE OVERVIEW

The latest Management Systems, such as ISO9001, ISO14001, ISO45001, all require a Risk-Based approach. ISO31000 Risk Management - Guidelines serves as a holistic reference for integrating across all the different Management Systems. The basis for assessing risks (as well as opportunities), appropriate treatments to strengthen the Organisation's effectiveness in meeting its Objectives and enhance its resilience to adverse effects are also established by implementing ISO31000.

You will no longer be required to perform separate Risk Management for each of the standards. Attend this 1-day interactive workshop will share on the tips, aligning and applying the ISO31000 Risk Management Principles, Process and Framework onto other management systems.

COURSE OBJECTIVES

At the end of this course, you will be able to :

- ⇒ Appreciate the importance of Risk Management during the implementation of different ISO standards
- ⇒ Familiarize with the ISO31000 Principles, Process and Framework
- ⇒ Apply and align these principles, process and framework into other ISO standards with requirements for Risk Management
- ⇒ Identify, analyse, evaluate and monitor potential risks and opportunities to acceptable residual risk levels

COURSE AUDIENCE

This course is ideal for:

- ✓ Professionals involved in implementing and managing ISO standards for your organisation with a risk management requirement
- ✓ ERM Coordinators, DR, BCM, HR, Operations, Facility, Risk, IT, Health & Safety and Security Managers
- ✓ Professionals wishing to start planning your ERM program from scratch are also encouraged to attend this course
